Chapter 1

Introduction

Chapter 2

Overview of the Standard Model of Particle Physics

2.1 Particle Content

2.2 Electroweak Symmetry Breaking and the Higgs Mechanism

2.3 The Hierarchy Problem and Fine Tuning

2.4 Dark Matter and the WIMP Miracle

Chapter 3

The Supersymmetric Extension to the Standard Model

3.1 SUSY Lagrangian and Particle Content

3.2 Gauge-Mediated SUSY Breaking

3.3 Experimental Status of SUSY

Chapter 4

The Large Hadron Collider

Chapter 5

The Compact Muon Solenoid Experiment

5.1 The Detectors and Their Operating Principles

5.1.1 Tracking System

Pixel Detector

Silicon Strip Tracker

5.1.2 Electromagnetic Calorimeter

5.1.3 Hadronic Calorimeter

5.1.4 Muon System

5.1.5 Far Forward Calorimetry

5.2 Triggering, Data Acquisition, and Data Transfer

5.2.1 Level 1 and High Level Trigger Systems

5.2.2 Data Acquisition System

5.2.3 Data Processing and Transfer to Computing Centers

Chapter 6

Event Selection

6.1 HLT

6.2 Object Reconstruction

6.2.1 Photons

6.2.2 Electrons

6.2.3 Jets and Missing Transverse Energy

6.3 Photon Identification Efficiency

Chapter 7

Data Analysis

7.1 Modeling the QCD Background

7.2 Modeling the Electroweak Background

7.3 Results

Chapter 8

Interpretation of Results in Terms of GMSB Models

8.1 Simplified Models

8.2 Upper Limit Calculation

8.3 Cross Section Upper Limits

8.4 Exclusion Contours

Chapter 9

Conclusion
